

Summarize the Article:

We should account for and eliminate bias in artificial intelligence so that it can be used to get rid of bias in human decision-making and preserve human dignity.

Summarize the Verses:

We are called to love one another and treat each other as equals in the eyes of the Lord. One way we can love and honor each other is by not using our freedom to indulge in the flesh. This could look like inserting bias into an AI that would unfairly benefit you while causing harm to others around you. We are commanded to do nothing out of selfish ambition or vain conceit, which could be the cause of bias in an AI.

What are your general thoughts?

Bias is a broad term that can include many different concepts, and it is hard to fully understand the author's intention without more clarity on the definition. Almost everything in our world has some sort of bias attached to it, and it will be extremely difficult to remove all bias. The author might have included many of these biases in the accounted-for section, but they don't specify what it means to do this. The first sentence from the second paragraph of the article is very similar to the other articles and repeats ideas stated previously.

Do you agree with everything?

Many of the terms used in this article are vague and have a variety of different meanings. I agree with most statements made in the article. AI is a valuable tool that can be used to help us eliminate bias in many situations. It can help us determine when bias is affecting our decision-making or avoid bias altogether. In order for AI to do this, it must be made without bias, which is consistent with what the article is saying.

Do you have any additions or changes to this article?

As a reader, I would have appreciated more details on what the author means by bias. This would have helped the reader understand more about the type of situations we should be preventing. There are also some biases that help people and forward worthy causes, and it would have been interesting to hear the article address good biases as well as ones that should be eliminated.

Do you have any additional questions?

There are a wide variety of different ideologies and agendas out there, and I think it would be hard to determine when they cross the line described in the article. I also think people would have different opinions on where to draw the line and how to stop AI from crossing the line further. Bias could also cloud our judgment if we are not personally in favor of the particular use of AI, but it is not seeking to subjugate human autonomy under the power of the state.
